

last updated: May 30, 2024

From 2015–2020 I taught an annual six-week introductory course for second-year undergraduates at the Vrije Universiteit in Amsterdam. This is the second half of a twelve-week course. The first part uses no matrix algebra, but the second part does. Each of the six weeks contains two sessions of two hours each. In the first session I give a lecture on the required material, the second session is an exercise class. I wrote a textbook for this course: *Introduction to the theory of econometrics*, VU University Press (2017).

From 2021-2024 I taught a premasters course in August for students entering the Masters program in econometrics. The purpose of this course is to bring the students to the required level in matrix algebra, statistics, and econometrics, so that they can fruitfully follow the masters courses.

What I will be teaching in 2025 and beyond is still unknown.

Office hour

After appointment only.
